

About NRG2fly

NRG2fly is building a European charging network for electric aviation, and we're ready to support you with proven expertise and operational infrastructure.

What we bring to the table?

- * **Real-world operational experience**
The Netherlands leads globally in electric flight movements. More charging sessions run through our network than anywhere else, helping us navigate this young market.
- * **We're building a European Aviation Charging Network**
With 8 operational stations across the Netherlands and Germany, we've tackled diverse airport environments—from flight schools to commercial airfields.
- * **Future-Proof design**
Our stations serve both aircraft and ground support equipment (GSE), creating viable operations beyond early-stage flight volumes alone.

How NRG2fly can help you?

✓ Infrastructure Consultancy ✓ Turnkey Implementation ✓ Operational Support ✓ Charging Standards Expertise ✓ Energy Hub Development ✓ R&D ✓ Market Access

Meet our Flagship Charging Stations!

E-Flight Academy (EHTE)

The world's first electric flight school, proving the concept in daily training operations

Lelystad Airport (EHLE)

Part of Schiphol Group, demonstrating scalability for major airport operators

BOOK A DEMO!

We'd be happy to show you our charging stations and European network, and discuss how we can support you. **Schedule an online demo with us!**
